

ADVIZOR® 5.6 Now Available.

Data Discovery and Analysis over the Web is Faster and Easier than Ever.

CHICAGO, IL – June 15, 2010 – ADVIZOR Solutions® today released version 5.6 of its data discovery and business analysis software suite. Built on world class in-memory-management, interactive visualization, and predictive analytics, ADVIZOR empowers business people to understand and analyze information without relying on others to prepare or interpret the results.

“Our customers keep telling us they are not getting what they need from their current Business Intelligence solutions,” says Doug Cogswell, President & CEO of ADVIZOR Solutions. “The answer is not 800 reports or OLAP cubes or some complex query environment – these are not flexible and are too difficult for most people to use. We deliver a simple and effective interface that business people can use to analyze data on their own and make decisions.”

ADVIZOR’s products are designed for point-and-click ease of use and do not require specialized IT training. ADVIZOR can simultaneously tap into nearly all data sources from the desktop to the enterprise in order to create powerful interactive dashboards powered by its patented Visual Discovery™.

The 5.6 release includes substantial enhancements in the following areas:

- ADVIZOR Web Delivery using Silverlight. ADVIZOR’s unique web delivery of interactive visualization dashboards has taken a giant leap forward with a complete rewrite using Microsoft’s new Silverlight technology. ADVIZOR Server 5.6 is now browser independent, has a “web 2.0” look and feel, and supports additional functionality available previously only in our client products. ADVIZOR’s leading edge capability in enabling end-users to perform discovery and analysis on their own, without relying on outside experts for assistance, is significantly enhanced with this release.
- Flight Recorder v 2. In addition to tracking each discovery / analysis step in order to “show me where I’ve been”, the flight recorder now allows “one click” to “take me back to where I’ve been”. In addition, flight records can be saved for later use and / or sharing with other users. This capability has received very high marks from our customers because it helps structure and retain the ad hoc discovery process performed by end-users, and allows it to be easily repeated.
- Faster Project Load Times. New ADVIZOR technology has led to improvements in loading and storing data in-memory, from 1 spreadsheet to 80+ database tables. As a result, 5.6 will load and run large projects up to twice as fast and with less memory space than prior product versions. These improvements apply to both 32 and 64 bit ADVIZOR systems.

ADVIZOR 5.6 is available today – see www.advizorsolutions.com for more details.

About ADVIZOR Solutions® , Inc.

ADVIZOR Solutions is a leading provider of easy-to-use business analysis software. Built on patented in-memory-data-management and interactive data visualization software spun out of Bell Labs Research and world class predictive analytics, ADVIZOR enables people to make better and faster fact-based decisions from their business data. ADVIZOR enables this through:

- Simple and clear visual display;
- Easy ad-hoc interaction and analysis with a mouse;
- Flexible thick and thin client deployments; and
- Tight integration with common databases and office tools

ADVIZOR software is sold worldwide through offices in the US as well as through partners in Europe and Asia.
