

## ADVIZOR® Releases 6.8

**Downers Grove, IL – December 14, 2016** - ADVIZOR Solutions® released version 6.8 of its data discovery and business analysis software suite. Recognized for its in-memory-data-management, interactive data visualization, and fully integrated predictive analytics, ADVIZOR empowers business people to understand and analyze information without relying on others to prepare or interpret the results. Its solutions can be run locally or from a hosted SAAS solution.

6.8 brings you updates in four key areas:

- New and improved Charts, including a Text Chart which enables you to annotate pages
- High-density screen support
- Expression Builder updates for ease of date calculations
- Predictive Modeling updates to simplify the model configuration process, shorten the time to complete, and make the user interface more intuitive

This release is another big step towards our upcoming 7.0 release, which will complete a range of initiatives that we have been working on over the past couple of years. These initiatives focus on end-user self-service and fall into five areas:

- (1) Look and Feel,
- (2) Clear Context for End Users,
- (3) Flexible and Easy Authoring,
- (4) Embedded Predictive Modeling, and
- (5) Access to a Wide Variety of Data-sources with the ability to load and transform them in ADVIZOR.

ADVIZOR 6.8 is available today. See [www.advizorsolutions.com](http://www.advizorsolutions.com) for more details.

### **About ADVIZOR Solutions®, Inc.**

ADVIZOR Solutions is a leading provider of self-service data discovery and analysis software. Built on patented in-memory-data-management and interactive data visualization software spun out of Bell Labs Research with fully integrated predictive analytics, ADVIZOR enables people to make better and faster fact-based decisions from their business data.
